

**Orbit is successfully providing design optimization by using advanced engineering solutions for its customers.**

Recently Orbit optimized its bearing design for its European customers by using same size bearings in more advanced applications. Orbit Technology Center with its years of experience, high-end softwares and testing systems optimized the bearing design to add 10% more load carrying capacity in the same bearing, thereby broadening its scope of usage.

Orbit continues to improve and optimize its products and is working with customers on several new prototypes for the Truck and Trailer industry.

**Orbit has increased its exports by 10% in European countries.**

In 2012-13 Orbit has seen an increase of 10% in its exports to Europe. It has not only increased its share of business with loyal customers but also acquired new customers. For years Orbit has grown its business by providing a high quality product at a competitive price while making customer service its top priority. It has adapted to the changing needs of customers by developing a line of premium standard bearings for advanced requirements of the truck and trailer industry.

**Orbit participated at HANNOVER MESSE 2013. Orbit will also be exhibiting at AGRITECHNICA in Hannover (10 to 16 Nov 2013)**

Orbit exhibits in most of the world's leading international exhibition for Automobile, Agricultural and Industrial machinery and equipment. It presents not only products and services but also new initiatives.
